Victorian Sliders®

Timber-Look Joint

Victorian Sliders®
Sash Windows

Your view of the perfect window is about to change.

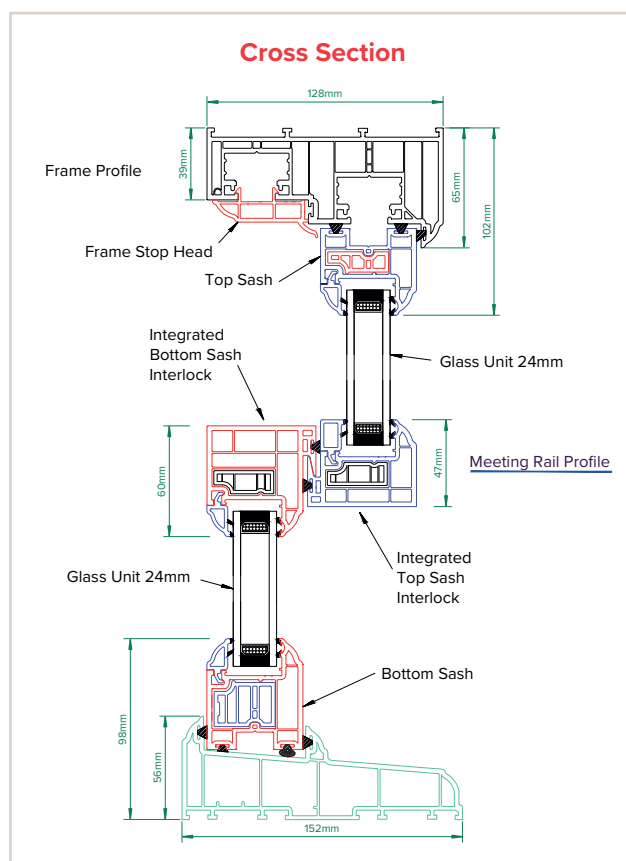

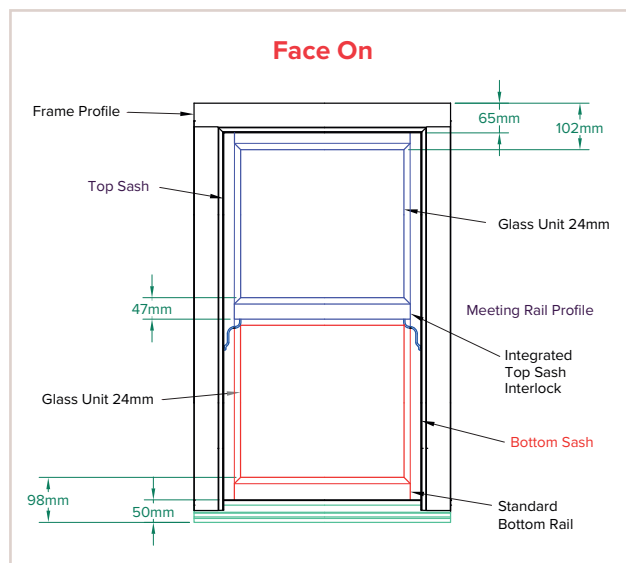

ECOSlide® timber-look joints are an optional enhancement designed to authentically replicate the vertical and horizontal joint detailing found in traditional timber sash windows, improving the visual authenticity.

Aluminium cleat technology has been re-engineered to accurately replicate traditional timber detailing, creating a secure and durable connection between profiles. Combined with skilled hand assembly, it enables every timber-look joint to be produced with precision, consistency and authenticity.

Key Features:

- ✓ Replicate traditional timber joint lines
- ✓ Enhance the overall authenticity of the window
- ✓ Seamlessly integrates with existing ECOSlide® features
- ✓ Available across all colour and foil options
- ✓ No change to installation
- ✓ Complimented perfectly by our run-through sash horns
- ✓ Available to order alongside existing features such as our deep bottom rail
- ✓ Fully covered under standard warranty

Timber-look joints are purely aesthetic and are fully integrated into the ECOSlide® system, ensuring the structural integrity, performance and quality remain unchanged.

While suitable for all property types, timber-look joints are most effective for:

Heritage and
conservation projects

Period-style
properties

Design-led or premium
residential developments
